## INTRODUCTION

Socio-economic information useful for Harborpark planning is presented in this volume on "Economic Data". This includes information for Harborpark and its neighborhoods, in the perspective of that for the City of Boston as a whole.

Boston's population 1790 to 1980 with projections to 2010 portrays the pattern of growth of the City to 1930, the halt in growth 1930-1950, the ebbing of population size since, and the projected stabilization.

Information on Harborpark neighborhood population, housing and labor force, as of 1980, is presented, together with relevant maps.

Business establishments and employees in Harborpark, as of 1981, are detailed at the 2-digit standard industrial classification level.

Employment in the City as a whole, 1976-83, with projections to 1990, and similar information for Central Boston and Downtown office employment provide a context for information on Harborpark employment.

The broader context of Boston's projected employment in relation to that of the state and the nation is also presented.

The incidence of City tax foreclosure and tax delinquency in Harborpark are noted in excerpts from a special report.

Projections of housing requirements in Boston are relevant to the potential role of Harborpark.

Background information on public infrastructure expenditures in Boston, 1978-83, is provided.

A summary and listing of private development investment projects in Harbor neighborhoods, 1975-83 actual, 1984-87 scheduled, and 1988 and beyond projected, are presented.

Establishments and Employment  
in  
Boston Harbor Neighborhoods  
1981

Jeffrey Brown  
Boston Redevelopment Authority  
Research Department

In Boston's modern urban economy, marine-related activities account for only a tiny fraction of the city's job base. Although the waterfront was once vital to the city's job base, the Boston economy is now dominated by land-based activities related to information, knowledge, communication, finance, health and educational services, legal and business services and retail trade.

Marine-related activities such as fishing, water transportation, ship repair, fuel distribution, cargo handling, recreational boating, and retailers of marine supplies employ, at most, four thousand workers. More likely, the marine-related jobs number around 1,000 to 2,000, or less than one percent of all jobs in Boston.

Other businesses that happen to be on Boston's waterfront, such as hotels, offices, restaurants, museums and manufacturing plants, employ around 15,000-20,000 workers, or three to four percent of Boston's total employment.

The most accurate data on employment in sub-city areas of Boston are County Business Patterns by zip code area (1981). For the six zip code areas that touch the waterfront (02109, 02110, 02127, 02128, 02129, and 02210), our file shows 4,600 private business establishments and 130,000 jobs (see attached table and maps). This includes 20,000 jobs in finance, insurance, real estate and business services in the financial district; 14,000 manufacturing jobs in Charlestown, East Boston, and South Boston; 11,000 jobs at Logan Airport; and 7,000 jobs in eating and drinking places and hotels.

Boston Employment,  
City of Boston, Central Boston and Downtown Office,  
1976-1983 and 1990 Projected

Jeffrey P. Brown  
Gregory W. Perkins

Boston Redevelopment Authority  
Research Department

Update  
August 1984

The City of Boston's employment base expanded by 59,000 from 1976-1983. By 1990, workplaces in the City could employ an additional 72,000 employees. Most of the job growth has taken place and will continue to occur in a broad range of services and finance, insurance and real estate.

The Central Boston area accounted for 59 percent of all jobs in the City, in 1983, but provided 83 percent of the job growth from 1976 to 1983.

Similarly, the primary source of jobs and growth in Central Boston were offices in the downtown. In fact, employers in downtown offices were the source of nearly one-third of all jobs in the City in 1983, and made up almost half of net new jobs in Boston from 1976 to 1983. Over the rest of this decade, office employment is likely to grow at a faster rate than employment in all sectors combined.

The attached set of tables presents estimates of actual employment in Boston for selected years between 1976 and 1983 (Tables 1-3) and projections of employment to 1990 (Tables 4-6).<sup>1</sup> For each period, the estimates and projections cover three geographic areas: (1) the City of Boston, (2) Central Boston, and (3) Downtown Boston (office only).

#### City of Boston

The City of Boston (see Figure 1) includes all sixteen (planning district) neighborhoods within the municipal boundaries. The employment information for 1976-1983 is based on Suffolk County employment and the Boston share, by industry.<sup>2</sup> The Suffolk County employment was

---

<sup>1</sup> Column components in tables may not sum due to rounding.

<sup>2</sup> The share varies by industry, but averages 96 percent.

Figure 1

# PLANNING DISTRICTS

estimated from a base,<sup>3</sup> adjusted to cover all full and part-time employment<sup>4</sup> in workplaces in the County. The services subsectors (hotel, medical, educational, etc.) were estimated from County Business Patterns.<sup>5</sup> Estimates for 1983 are based on four quarters of employment data from the Massachusetts Division of Employment Security.

Projections of Boston employment were based on state and national projections by industry.<sup>6</sup>

#### Central Boston

Central Boston (see Figure 2) covers all of downtown Boston plus Beacon Hill, the Back Bay, Charlestown, the waterfront, and portions of the Fenway, South End and South Boston.<sup>7</sup> The Central Boston employment series was estimated from County Business Patterns information by zip code areas<sup>8</sup> for a base year (1981), and adjusted to cover public employment and all other full and part-time employment. For years prior to 1981, the rates of employment change in the City as a whole were applied to the Central Boston base, by industry, to obtain employment estimates for Central Boston for those years.<sup>9</sup> For 1983-1990, Central Boston employment was assumed to change at the same rate as City employment, by industry, 1983-1990.

Figure 2

## Central Boston

### Downtown Boston Office

Downtown Boston (Figure 3) covers the central business district, Beacon Hill, the northern waterfront, the South End and Back Bay to Massachusetts Avenue. The employment series for downtown offices originated with the BRA's Office Industry Study.<sup>10</sup> That study, based on a survey of the firms occupying Boston's Office Space, identified the industry of the firms and derived coefficients (the ratio of office employees to all employees) by industry for 1977. For this analysis, the coefficients were applied to City employment, by industry, for 1977 and 1980-1983. Similarly, projections for 1990 were computed using adjusted coefficients.<sup>11</sup>

These tables summarize recent trends and expected changes in employment in Boston. The estimates will be updated periodically as new current Suffolk County data are released and as projections are refined.

---

<sup>10</sup> Michael Matrullo, The Office Industry Survey, Boston Redevelopment Authority Research Department, March 1979.

<sup>11</sup> The coefficients were raised by ten percent to represent a shift toward more office employees relative to all employees by industry. This would coincide with a continued trend toward more services-producing and fewer goods-producing jobs in the City's economy.

Figure 3

# DOWNTOWN BOSTON

BOSTON'S PROJECTED EMPLOYMENT IN THE 1980:  
SERVICES, INFORMATION, AND HIGH-TECHNOLOGY INDUSTRIES LEAD  
A RESURGENCE OF JOB OPPORTUNITIES

Gregory W. Perkins

Boston Redevelopment Authority  
Research Department

January 28, 1983

R/8/1/83

Boston's employment growth in the 1980s will be led by a broad range of services, information and high-technology industries. The City's net gain of more than eighty thousand jobs from 1980 to 1990 would exceed the growth rate in Massachusetts and nearly keep pace with national employment growth (see Tables 1 and 8).

These projections are based on published national and state projections and historical trends in the Boston economy. Employment growth in the 1980s will reflect a continued national shift from goods-producing to services-producing activities. Services and trade will account for more than one-half of job growth nationally (see Table 2). In Massachusetts, trade and services will supply two-thirds of the net new jobs and manufacturing of durable goods (mainly high-technology industries) will contribute another twenty percent of the growth (see Table 3).

Boston will rely on finance, transportation and communication, trade and a range of services related to information, high-technology manufacturing, health, education, business and social organizations (see Tables 4 and 5). In fact, ten of the top fifteen growth industries for the 1980s are in services and finance (see Table 6). Conversely, the declining industries are led by government, proprietors, and several of the older, nondurable goods manufacturing industries (see Table 7).

The projection method is explained in footnotes to Tables 1-5.

Table 1

## 1980-1990 EMPLOYMENT PROJECTIONS

	1980	1990	Net Change <u>1980-90</u>	Percent Change <u>1980-90</u>
United States	106,199,000	130,665,000	+24,466,000	+23.0%
Massachusetts (MDES)	2,649,350	2,966,450	+ 317,100	+12.0%
(BRA)		(3,136,830)	+ 487,480	+18.4%
Boston	548,497	631,517	+ 83,020	+15.1%

Note: Table includes BRA estimate of Massachusetts employment projection set at about 50 percent greater than MDES projection or 80 percent of U.S. rate. Boston rates are 80 percent of State rates and 65 percent of U.S. rate.

#### Source and Methodology:

Compiled by BRA Research Department using projections of U.S. industry employment growth 1980-1990 from Valerie Personick, "The Outlook for Industry Output and Employment through 1990", Monthly Labor Review, August 1981 pp. 28-41, and Massachusetts projections of industry employment prepared by the Massachusetts Division of Employment Security, "Massachusetts Employment: Projected Changes 1980 to 1990", October 1982. Boston projections were made at the detailed (2-digit SIC) industry level, taking the lower of the growth rates from the national and state projections (usually Massachusetts rates) except for a selection of about 20 (2-digit SIC) industries which give reasonable evidence of being fast-growth industries for Boston over the 1980-1990 time period. Thus, the Boston projection series is a "high growth scenario", and compares with an alternative moderate growth scenario of 60,000 net new jobs, for the period.

Table 6

## BOSTON'S TOP FIFTEEN GROWTH INDUSTRIES FOR THE 1980s

Jobs		Percent
1. Health & Hospitals	17,036	1. Business & Advertising 44.8%
2. Business & Advertising	15,772	2. Credit Institutions 44.4
